

## 40 years GRUBE

### Progress, Safety, Experience.

The industrial landscape is continuously changing. Previously, the focus was on constructing new power plants and process cells, but today it is more and more the qualified demolition of industrial plants that requires specialized knowledge and a high environmental and safety awareness. Due to this change, the requirements to the GRUBE group have changed as well. High-quality work is important. Equally important are the commitment and the service-level of the partner. The rapid technical progress, constantly changing requirements regarding materials and consistently new standards and laws demand an industry partner who is keeping track. Since 40 years, GRUBE keeps up with the progress and is always

one step ahead of the standards regarding service questions. Knowing the industry demands of tomorrow - that's what makes GRUBE the No. 1 partner in the large scale industry.

We ensure relaxation.
